

**MODUL LSC200 -
ADVANCED LITERATURE SEARCH I :
SCOPUS**

MODULE OVERVIEW / INTRO

1 What is LSC200 Module?

This module help postgraduate students and researchers in completing their research work. The aim of this module is to introduce peer-reviewed and citation database that produce high quality articles for their research.

2

Module highlight :

1. Scopus Source List
2. Basic Search
3. Authors Search
4. Affiliations Search
5. Advanced Search in Scopus
6. Analyze Search Results
7. Article Metrics in Scopus
8. Personalization

3 Teaching Medium

1. Online via Webex, Google Meet, Google Classroom
2. Face to Face : Computer Lab (After MCO period)

4

Duration

2 Hour(s)

Research Intelligence

Scopus

Data | Curated. Connected. Complete.

75M+ records. 24,600 titles. 5,000 publishers.

Scopus is a source-neutral abstract and citation database, curated by independent subject matter experts. It places powerful discovery and analytics tools in the hands of researchers, librarians, institutional research managers, and funders.

Scopus generates precise citation search results and automatically updated researcher profiles, creating richer connections between people, published ideas, and institutions. In addition to protecting the integrity of the scholarly record, Scopus helps bolster institutional research performance, rank, and reputation.

Scopus is updated daily, therefore, the numbers presented here are subject to change.

Scopus Fact Sheet : https://www-elsevier-com.ezaccess.library.uitm.edu.my/data/assets/pdf_file/0017/114533/Scopus_GlobalResearch_Factsheet2019_FINAL_WEB.pdf

Tips > Navigation Bar

The navigation bar contains the following buttons:

Sources

Click Sources to browse an alphabetical listing or search for available Scopus sources and titles.

Search

Click Search to open the Scopus search forms: Document, Author, Affiliation, and Advanced.

Analytics

Click Analytics to open the Journal Analyzer. Compare up to 10 Scopus sources on the number of citations, documents, and percentage not cited.

Alerts

Click Alerts to view a list of a previously saved search, document citation, or author citation alerts.

My list

Click My list to view temporary lists of documents. You can also choose to save documents in a basket permanently.

My settings

Click My settings to view or modify your account or profile information and to set up preferences.

Scopus Sources List

- The Scopus list of journals consists of indexed publications that are either serial or non-serial.
- Examples of serial publications are journals, annuals (such as reports, yearbooks, and directories), and book series, and these are assigned an ISSN (International Standard Serial Number).
- Non-serials include one-off books, monographs, reports, etc., and these are assigned an ISBN (International Standard Book Number).
- From the Browse sources tab, you have the option to download a complete source title list to Microsoft Excel.

The screenshot shows the Scopus Sources page. The 'Sources' tab is selected and highlighted with a red box. Below the search bar, there is a 'Subject area' dropdown menu. A notification box titled 'Improved Citescore' is visible. The main content area shows '41,462 results' and a table of sources. The 'Download Scopus Source List' button is highlighted with a red box. The table below shows the following data:

	Source title ↓	CiteScore ↓	Highest percentile ↓	Citations 2016-19 ↓	Documents 2016-19 ↓	% Cited ↓
<input type="checkbox"/>	1 Ca-A Cancer Journal for Clinicians	435.4	99% 1/331 Oncology	47,455	109	94
<input type="checkbox"/>	2 MMWR Recommendations and Reports	152.5	99% 1/275 Health (social science)	2,288	15	87

SCOPUS Field Codes

Field codes are used in an Advanced search for a term in a specific field.

https://service.elsevier.com/app/answers/detail/a_id/11236/supporthub/scopus/

Examples:

The search **TITLE-ABS-KEY(virus outbreak)** would return documents where the terms appear in the **title, abstract or keywords.**

25 **Zika virus seroprevalence in women who gave birth during Zika virus outbreak in Brazil - a prospective observational study** Alves, L.V., Leal, C.A., Alves, J.G.B. 2020 Heliyon 6(9),e04817 0

Open Access

Hide abstract ^ View at Publisher Related documents

© 2020 The Authors Background: The recent Zika virus (ZIKV) outbreak in Brazil started in August 2015 and ended in May 2017 without effective public health measures for its control have been taken. The immunological status of a community may not only predict future outbreaks as well to answer questions regarding ZIKV not known yet. Objective: To verify the seroprevalence of ZIKV in a group of women who were pregnant during the Zika virus outbreak in Recife, three to nine months after the delivery, and to evaluate the neurodevelopment of their children. Methods: A cross-sectional study enrolled participants of a cohort study held at Instituto de Medicina Integral Professor Fernando Figueira (IMIP) during the ZIKV outbreak in Recife. Mothers who gave birth between the last trimester of 2015 and the first semester of 2016, period of the peak of microcephaly outbreak in Recife, were invited. All participants had the serum tested by the anti-ZIKV IgG/IgM enzyme-linked immunosorbent assays, ELISA kit (Euroimmun, Lübeck, Germany). All children whose mothers presented positive serology for ZIKV performed the IgG/IgM ELISA test for ZIKV. These children were also evaluated by a neuropediatrician and the Denver II development screening test was applied. Results: Among the 132 studied pregnant women who gave birth at the peak of ZIKV outbreak in Recife, all were ZIKV IgM negative and 81 (61,3%) had ZIKV IgG positive. Mothers ZIKV IgG positive had more fever and rash during the pregnancy as compared with mothers negative for ZIKV; respectively 27/81 (33,3%) vs 6/51 (11,7%), $p = 0.005$ and 22/81 (27,2%) vs 4 (7,8%), $p = 0.016$. Only one child had IgG positive serology for ZIKV. No children had neurodevelopment defect for the age group and the Denver II normal scores. Conclusions: A high ZIKV IgG seroprevalence in pregnant women at the end of the ZIKV outbreak in Recife was found. This finding suggests that community protective immunity may have contributed to the end of ZIKV outbreak in Recife, Brazil.

Analyze Search Results

The screenshot shows a search results interface. On the left, there are filters for 'Refine results' (Limit to, Exclude) and 'Open Access' (All Open Access, Gold, Hybrid Gold, Bronze, Green). Below these are filters for 'Year' (2021, 2020, 2019). The main area displays a list of documents under the 'Documents' tab. A dropdown menu is open on the right, showing sorting options: Date (newest), Date (oldest), Cited by (highest), Cited by (lowest), Relevance, First Author (A-Z), First Author (Z-A), and Source Title (A-Z). The document list includes:

Document title	Authors	Year	Source	Citations
1 Molecular investigation of a RSV outbreak in a geriatric hospital <i>Open Access</i>	Hababou, Y., Taleb, A., Recoing, A., (...), Gault, E., Rameix-Welti, M.-A.	2021		
2 A review of the presence of SARS-CoV-2 RNA in wastewater and airborne particulates and its use for virus spreading surveillance	Anand, U., Adelodun, B., Pivato, A., (...), Tripathi, V., Di Maria, F.	2021	Environmental Research 196,110929	0
3 The novel SARS-CoV-2 pandemic: Possible environmental transmission, detection, persistence and fate during wastewater and water treatment	Mohapatra, S., Menon, N.G., Mohapatra, G., (...), Gin, K.Y.-H., Mukherji, S.	2021	Science of the Total Environment 765,142746	4

Results are ordered by year of publication as default. You can create a new order with the sorting box (on the right): based on **relevance, most cited or oldest articles**. Or you could order the results alphabetically by **first author or source title**.

CiteScore CiteScore rank & trend Scopus content coverage

Improved CiteScore methodology
CiteScore 2019 counts the citations received in 2016-2019 to articles, reviews, conference papers, book chapters and data papers published in 2016-2019, and divides this by the number of publications published in 2016-2019. [Learn more >](#)

CiteScore 2019	4.1
SJR 2019	0.858
SNIP 2019	1.089

CiteScore 2019 CiteScoreTracker 2020 ⓘ

4.1 - $\frac{14,231 \text{ Citations } 2016 - 2019}{3,498 \text{ Documents } 2016 - 2019}$	5.0 - $\frac{24,978 \text{ Citations to date}}{5,043 \text{ Documents to date}}$
--	--

- **CiteScore** measures average citations received per document published in the journal. It is useful for comparing journals within the same field, ranking them in subject categories and indicating the percentile they fall into.
- **SJR (SCImago Journal Rank)** measures citations weighted by prestige. It is useful for comparing journals within the same field, and forms the basis of the subject category ranking. Q1 journals are cited more often and by more prestigious journals than those in the other quartiles.
- **SNIP (Source Normalized Impact per Paper)** measures citations weighted by the subject field. It is useful for comparing journals not just within the same field but also across disciplines. A SNIP of 1.0 means that a journal's articles are cited at the average rate for all journals in the same subject area; anything over 1.0 indicates more citations than average in the field while a SNIP of less than 1.0 is below the average. A SNIP of more than 1.5 generally indicates a very well-cited journal.

University of Toronto, Canada
University of Birmingham, United Kingdom

Abstract
This article focuses on the importance and influence of Industry 4.0 and consequently the Internet-connected technologies for the creation of value added for organizations and society. The contribution of the article is mainly conceptual. With the development of the Internet, the Internet of Things that is central to the new industrial revolution has led to "Industry 4.0." The aim of this article is to synthesize the known history and progress of Industry 4.0, and to investigate the changes that will result from Industry 4.0 and with the development of the Internet of Things. © 2016, The Author(s)
